

Andrew P. Higginbotham

Graduate Institution: Harvard University

Location: Cambridge, MA

Graduate Discipline: Experimental Condensed Matter Physics

Hometown: Durham, NC

Research Interests:

My past research interests have been in a variety of fields such as fluid mechanics, nonlinear optics, and laser driven fusion. Highlights include the generation of laser-driven nuclear fusion using aerosol targets and the development of fast (<1s) computational methods for the identification of new organic nonlinear optical materials.

My future research will focus on the physics of novel, hard condensed matter systems.

About me:

I was born and grew up in Durham, NC and did my undergraduate work at Harvey Mudd College in Claremont, CA where I graduated with high distinction. After graduating I spent a year studying at the University of Cambridge under a Churchill Scholarship, where I obtained an MPhil in physics. Next year I will begin studying at Harvard University towards a PhD.

Some of my hobbies are running, golf, and guitar.
