

Hou Keong Lou

“Tim”

Graduate Institution: Princeton University

Location: Princeton, NJ

Graduate Discipline: High Energy Physics

Hometown: Edison, NJ

Research Interests:

High Energy Theory, High Energy Experiment, Phenomenology, Cosmology

About me:

I graduated from Rutgers University with a B.S. degree in physics and will be attending Princeton Physics Graduate School in High Energy Theory. During my undergraduate years, I have worked closely with the Rutgers High Energy group analyzing multijet resonances. I also spent one summer at CERN working on another high energy experiment research. Despite my research background, my primary interest is mainly high energy theory as relevant to experiments. I enjoy studying different areas of theoretical physics—from classical mechanics, to statistical mechanics and quantum field theory. In my leisure time, I enjoy playing guitar, hiking, camping and traveling.
