

Andy Yen

Graduate Institution: Harvard University

Location: Cambridge, Massachusetts

Graduate Discipline: Particle Physics

Hometown: Huntington Beach, CA

Research Interests:

I am interested in high energy particle physics. Recently, I have worked on searches for supersymmetry and exotic particles at the Large Hadron Collider. I have worked for four years with the CMS Collaboration and I plan to continue my work on particle physics in the future with the ATLAS Collaboration.

About me:

I completed my undergraduate career at the California Institute of Technology earning degrees in Physics and Business Economics and Management. When not working on physics problems, I spend my time traveling and doing landscape photography around the world. In addition to my work in high energy physics, I have also previously worked on the side in the financial industry as a quantitative analyst.
